## SSLD-R Liner Dispenser Installation & Operating Instructions

**MATERIALS:**

Full body shall be 304 grade, 16 gauge stainless steel with a brushed finish.

**OPERATION:**

Recessed stainless steel liner dispenser is to be used in conjunction with JD MacDonald stainless steel changing stations. Liner dispenser accommodates approximately 60 LCR liners.

**INSTALLATION:**

The unit has four recess mounting holes. Contact an architect and building official to make sure the blocking is adequate and complies with building codes.

*Recommended Blocking:*

203mm x 419mm

*Drilling the Holes and Mounting the Liner Dispenser:*

1. Slide liner dispenser into blocking area (rough wall opening 419mm x 213mm x 102mm). Mark mounting hole locations on blocking studs.
2. Pre-drill holes marked in step 1 using a 4.76mm drill bit.
3. Slide liner dispenser into blocking area again and shim for a snug fit. Fix the liner dispenser into the pre-drilled holes using M6 x 50mm pan head wood screws (not supplied). Make sure you have the operating clearance into consideration.

For all other substrate types, contact an architect or fastener (fixings) expert for installation fastener type.
